Preface

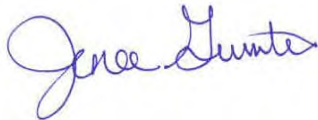

We are pleased to present this 52nd Edition of the *Kansas Statistical Abstract* (KSA). The KSA is compiled and published annually by The University of Kansas Institute for Policy & Social Research (IPSR).

The KSA Editorial Board extends a thank you to the many agencies that provided data for the KSA either personally or by making their data readily available on the internet. Sources for each table or graphical representation are noted herein.

We thank Carrie Caine, Christie Holland, and Whitney Onasch, IPSR, for their assistance with the KSA. We also thank IPSR student assistants Monica Maurer and Cassie Olender, who provided assistance with data entry and table preparation.

Finally, we hope this edition of the *Kansas Statistical Abstract* will serve as a valuable resource. Please let us know if there are ways we can increase its value.

On behalf of the Editorial Board,

Searching for Data

Searching for data in PDF files is made easy using the **find** function. Launch the find function by clicking Edit then select find. Enter one or more words in the find box and press enter. The find function then searches the entire document marking each point in the document where it locates your text.

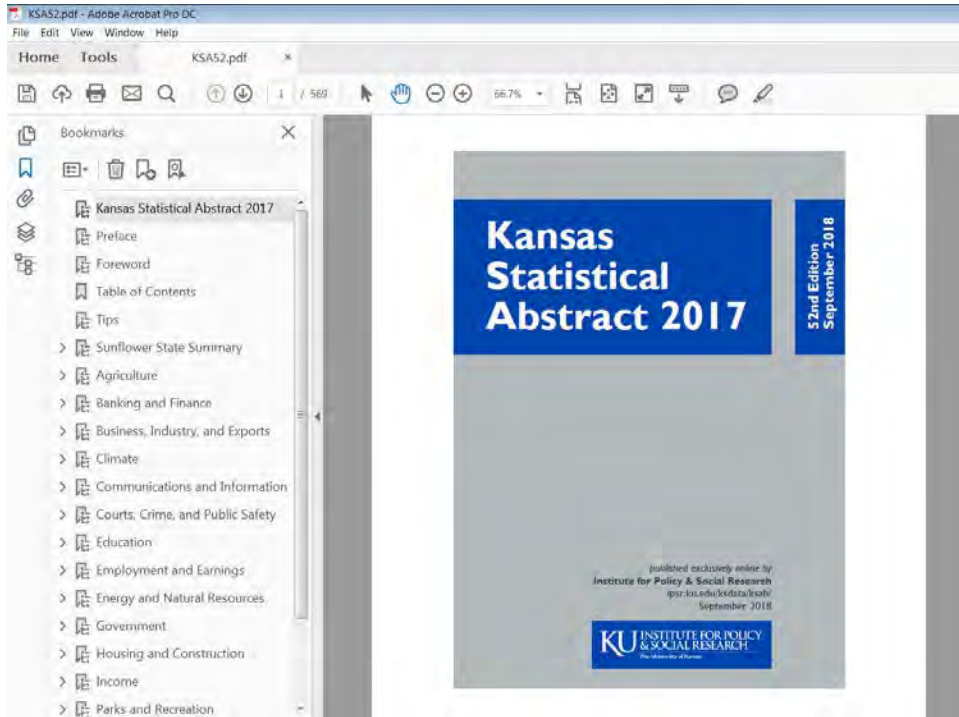

Tip: Practical uses of the find function include entering a city or county name to locate all pages that contain data for that city or county or searching by keyword to find data on a specific topic.

Zoom Tool

The **zoom** tool in Adobe Acrobat will allow you to zoom in or out on any page. The zoom in feature may be especially useful on some maps.

Table of Contents

The Table of Contents panel contains links to each individual section or chapter in the *Kansas Statistical Abstract*. Click the > symbol next to any chapter to expand the list of the tables in the chapter. Then click on the title of the table to automatically go to that table in the document.

Limitations of the Data

Some data in the *Kansas Statistical Abstract* are subject to sampling variability; see source for complete methodology and sampling information.

Data from the American Community Survey are associated with a 90% margin of error. We recommend calculating the coefficient of variation to determine the relative amount of sampling error for an estimate and using the following guidelines:

Coefficient of Variation (CV)	Reliability
Less than 12%	Reasonably reliable
12–40%	Use with caution
Greater than 40%	Do not use

Calculating the Coefficient of Variation (CV):

$$CV = ((MOE_{ACS} / 1.645) / EST_{ACS}) * 100$$

where MOE_{ACS} is the 90% margin of error and EST_{ACS} is the data estimate.

The SAT score averages are for college-bound Seniors. Possible scores on each part of the SAT range from 200 to 800. The SAT was completely redesigned in 2016; 2017 data not comparable with previous years.

Rankings of states based on SAT scores alone are invalid because of the varying proportions of students in each state taking the test.
