## Preface

We are pleased to present this 53<sup>rd</sup> Edition of the *Kansas Statistical Abstract* (KSA). The KSA is compiled and published annually by The University of Kansas Institute for Policy & Social Research (IPSR).

The KSA Editorial Board extends a thank you to the many agencies that provided data for the KSA either personally or by making their data readily available on the internet. Sources for each table or graphical representation are noted herein.

We also thank IPSR student administrative assistant Abigail Byrd, who provided assistance with visualizations, data entry, and table preparation.

The KSA relies heavily on data from the U.S. Census Bureau. With the forthcoming 2020 Census, we urge you to be counted. Census data are used to apportion Congressional seats to states, distribute federal funding to states, and guide local decision-makers in important planning efforts. We rely on Census data for our research and hope you value these data and will respond to the 2020 Census. Learn more about the 2020 Census at: <https://ipsr.ku.edu/ksdata/census/2020/>.

Finally, we hope this edition of the *Kansas Statistical Abstract* will serve as a valuable resource. Please let us know if there are ways we can increase its value.

On behalf of the Editorial Board,

Jena Gunter, Project Leader  
Assistant Director

### Zoom Tool

The **zoom** tool in Adobe Acrobat will allow you to zoom in or out on any page. The zoom in feature may be especially useful on some maps.

## Table of Contents

The Table of Contents panel contains links to each individual section or chapter in the *Kansas Statistical Abstract*. Click the > symbol next to any chapter to expand the list of the tables in the chapter. Then click on the title of the table to automatically go to that table in the document.

## Limitations of the Data

Some data in the *Kansas Statistical Abstract* are subject to sampling variability; see source for complete methodology and sampling information.

Data from the American Community Survey are associated with a 90% margin of error. We recommend calculating the coefficient of variation to determine the relative amount of sampling error for an estimate and using the following guidelines:

Coefficient of Variation (CV)	Reliability
Less than 12%	Reasonably reliable
12–40%	Use with caution
Greater than 40%	Do not use

*Calculating the Coefficient of Variation (CV):*

$$CV = ((MOE_{ACS} / 1.645) / EST_{ACS}) * 100$$

where  $MOE_{ACS}$  is the 90% margin of error and  $EST_{ACS}$  is the data estimate.

Beginning in 1975, a farm is defined as any place with annual sales of agricultural products of \$1,000 or more. Between 1959 and 1975 a farm was defined as a place of 10 or more acres that had annual sales of agricultural products of \$50 or more or a place of less than 10 acres that had annual sales of \$250 or more. Prior to 1959 a farm was defined as a place of three acres or more in size with a value of farm products amounting to \$150 or more. Places of less than three acres with sales of \$250 or more were also considered farms.

Data may not sum to totals due to rounding.

Use caution when comparing estimates across counties in the same year. These estimates are correlated because they depend on the same regression coefficients.
