PREFACE

We are pleased to present this 56th Edition of the *Kansas Statistical Abstract (KSA)*. The KSA is compiled and published annually by The University of Kansas Institute for Policy & Social Research (IPSR).

The KSA Editorial Board extends a thank you to the many agencies that provided data for the KSA either personally or by making their data readily available on the internet. Sources for each table or graphical representation are noted herein.

We would like to thank a longtime contributor to the KSA. Genna Hurd has served as editor on the KSA for the last 18 years, and she served as sole editor for six editions. We conservatively estimate that she has edited over 10,000 Kansas Statistical Abstract pages. She has helped train at least 12 student assistants working on this publication. As Genna prepares to retire in the coming year, we wish to recognize her extraordinary contributions to this publication. The quality of the Kansas Statistical Abstract reflects the care and pride she takes in her work on behalf of the state.

We thank Lindsay Jorgenson and Mad Marshall for their support in developing the new design for the KSA. We also thank Sofia Berropsi Fernandez and Anna M. Owsley, IPSR student assistants, for their assistance with data entry and table preparation.

Please let us know if there are ways that we can improve the KSA.

On behalf of the Editorial Board,

Jena Gunter, Project Leader
Associate Director
Institute for Policy & Social Research

The **zoom** tool in Adobe Acrobat will allow you to zoom in or out on any page. The zoom in feature may be especially useful on some maps.

Table of Contents

The Table of Contents panel contains links to each individual section or chapter in the *Kansas Statistical Abstract*. Click the > symbol next to any chapter to expand the list of the tables in the chapter. Then click on the title of the table to automatically go to that table in the document.

Limitations of the Data

Some data in the *Kansas Statistical Abstract* are subject to sampling variability; see source for complete methodology and sampling information.

Data from the American Community Survey are associated with a 90% margin of error. We recommend calculating the coefficient of variation to determine the relative amount of sampling error for an estimate and using the following guidelines:

Coefficient of Variation (CV)	Reliability
Less than 12%	Reasonably reliable
12–40%	Use with caution
Greater than 40%	Do not use

Calculating the Coefficient of Variation (CV):

$$CV = ((MOE_{ACS} / 1.645) / EST_{ACS}) * 100$$

where MOE_{ACS} is the 90% margin of error and EST_{ACS} is the data estimate.
